

Vibes butterfly drive replacement Quick asses your frame

Drive is suitable to replace traditional belt drive pulley systems already existing.
Like this:

Top view existing drive pulleys on mine. You can just see the pulley below on the new drive. Just slide it to align

No drilling No screws. Supplied attachment to your frame : Super grade “stick” Velcro (3M)
Ready :Transport “peel off” /“ Push back on” quick reassemble.

1. Hopefully easy as this Seek flat sides existing on the top narrow end of your frame Just below existing drive pulleys

Have you a flat clear area
in the middle of your frame
min size 20 x 110 mm

110

20

The black area is
Super Velcro.

Example . Using free pre assessment trial kit :
See the vertical line below your existing
pulleys. Offer up the kit.
In the green band = go The drive can be flipped
180 deg.

Available vertical flat side Here
110 x 20mm ?

Or under here (I didn't have that
frame supports in the way)

**So just peel and stick the Velcro to the surface
on your frame / Push the drive unit to locate.**

2. A little more challenging Create your own simple adaptor plate

Example Premier Vibes frame : View is frame inverted upside down Note bars on the bottom You can see the wheels on the top. Old drive removed.

Existing fit plate of old drive.

Simply make your own adaptor plate.
Something like this Nothing fancy. Paint it if you like , hey no one is going to see it .

Screw/glue whatever to this existing plate. Just makes a flat right angle surface

Voila : Frame now right way up
Notes on top
Just stick/ Velcro the drive to your adaptor plate.

Fit drive either side as you like

The FREE Trial fit kit: Don't want anyone to be disappointed. Using the simple representative kit will reasonably assure the drive unit will fit your frame. OR NOT. Don't want it back.

Free post to UK. Not making any money here: If your international then send me postal costs. Flat pack A4 size trial fit kit Roughly same postage cost as an A4 certificate "do not bend". I will not refund you that cost If it turns out your frame is unsuitable. Perhaps not a lot to lose Good Vibes. Phil
